## Luzern Green Solutions

Luzern takes seriously our roll as a manufacturer to provide products that are sustainable and friendly to the environment. Equally important is Luzern's commitment to manufacture our products in the most energy efficient, environmentally sound manner.

Luzern utilizes state of the art tufting machines that are the most energy efficient available for CYP production. All yarn waste is contracted to a source that recycles the yarn for new product applications and we strive to achieve our goal of zero percent manufacturing waste.

Luzern produces rugs and broadloom carpet from two yarn systems. Our primary yarn system is 100% New Zealand Wool. Wool is a 100% natural product and is also 100% sustainable. The production of wool yarn has no negative environmental impact, is renewable and waste can be regenerated to develop new products. 100% wool is the most environmental friendly yarn system available for carpet and rug production.

Luzern is proud to partner with Aquafil USA to produce solution dyed nylon products. Like Luzern, Aquafil USA has a proud tradition of environmental stewardship. Aquafil defines this tradition in their program entitled "Seven Shades of Green" which can be reviewed on their web site [www.AquafilUSA.com](http://www.AquafilUSA.com). Click on the link for "Environment"

Whether you choose 100% wool or Aquafil solution dyed nylon, you can be confident you are using the most sustainable, friendly to the environment yarn systems available for the production of your Luzern rug or broadloom carpet.
